

# RECYCLED ABS

Recycled ABS is a sustainable material choice for the promotional industry, offering an eco-friendly alternative to virgin ABS plastic. ABS is a common thermoplastic polymer known for its strength, durability, and versatility. By using recycled ABS, companies can reduce their environmental impact while still providing high-quality promotional products.

The recycling process for ABS involves collecting and processing post-consumer and post-industrial ABS waste, turning it into a reusable material. This process helps divert plastic waste from landfills and reduces the demand for new, petroleum-based plastics. Recycled ABS retains many of the desirable properties of virgin ABS, such as impact resistance, toughness, and rigidity, making it suitable for a wide range of promotional items.

Promotional products made from recycled ABS can include tech accessories, office supplies, and automotive gadgets, among others. These products offer a practical and durable solution for brand promotion, with the added benefit of being more environmentally friendly. By choosing recycled ABS, companies can demonstrate their commitment to sustainability and responsible material use.
