

STAINLESS STEEL

Recycled Stainless Steel is a sustainable and durable material choice for the promotional industry. Made from post-consumer and post-industrial stainless steel scrap, recycled stainless steel reduces the demand for virgin resources and minimizes the environmental impact associated with mining and processing new steel.

Promotional products made from recycled stainless steel can include drinkware, keychains, utensils, and other durable items. These products offer the strength and longevity of stainless steel while being more environmentally friendly. By opting for recycled stainless steel, companies can showcase their commitment to sustainability and resource conservation.

The recycling process for stainless steel involves collecting, sorting, and melting down the scrap steel, which is then formed into new products.

Using recycled stainless steel for promotional items offers several advantages. It promotes a circular economy by turning waste into valuable products. It also reduces the carbon footprint associated with manufacturing new steel, contributing to a more sustainable promotional industry.
